

Simplify Suite[®]

Printing, Profiles, and Security

Manage and control your entire user environment with enterprise printing, profile, and security management. We've bundled our most popular and effective solutions into Simplify Suite. Assign printers, deploy desktops, control application access, enforce company policies, and more.

- Citrix ● VMware
- Microsoft ● hybrid
- workstations

- HDX/ICA ● PCoIP
- RDP ● 32-bit
- 64-bit

- Supports:
- Windows
 - macOS with Citrix

All-in-one, drag-and-drop interface that allows you to streamline, automate, and optimize the most challenging aspects of terminal server, virtual desktop, and workstation configuration. Simplify the administration of profiles, application management, printing, and user environments.

Printing: Eliminate print driver management. Redirect printers from remote user workstations, and assign network-managed printers on print servers to remote users.

Profiles and Security: Gain centralized profile control while eliminating bloat issues and slow logon times. Allow or restrict workspace customization settings. Control access to executables with white and blacklisting. All without GPOs/scripting.

Improves reliability, security, and performance in a terminal server environment, from a drag-and-drop console. Personalize and deploy, access advanced print features and functionality. All while eliminating the management of print drivers.

Return on Investment

With management all in one place, administrative and support efforts are drastically reduced, allowing administrators to focus less on printing and user management, saving time and money for your organization.
