

TX[®]

The Future of Printing

The future of printing is here. After decades in the printing and virtual environment industry, TX is the result. Print management for any environment. Enable users to print from any device, in any location, to any printer.

- Citrix • VMware • Microsoft
- Android • Mac OS • iOS

Integrations with:

- Windows/Mac printing • Google Cloud Print • AirPrint
- Android printing • Bonjour printing • mobile printing

Follow Me Printing

Printer and printer settings follow users regardless of the type of device they are using.

Guest Printing

Allow users to share their office printers with visitors. No admin intervention or network access required.

Pause & Release Printing

Initiate print jobs from a desktop and release the job from a mobile device once at the printer's location.

Proximity Printing

Grant users instant access to the closest printer based on their IP addresses.

Secure Print Queue for iOS

Users can share any print job securely via a mobile app.

Agentless Printing

Integrate with Google Cloud Print and allow users to print without installing an agent on their mobile device.

BYOD Printing

Use Android, Windows, macOS, or iOS, devices with networked printers with no driver installation.

Native Printing

Users can print directly from any business applications or end device.

Return on Investment

See a return on investment by giving time back to IT departments to focus on higher-level issues. Allow your users to bring their own devices to make the workday more productive. Eliminate user frustrations with failed or slow print jobs. Lower support costs by decreasing help desk calls and tickets. Boost your users' productivity with seamless printing, giving IT admins back hours they no longer have to spend on print-related issues.
